PROGRAM PROPOSAL · DRAFT FOR DISCUSSION

Bringing Zendo Home: East Coast Expansion & Community Crisis Response

A phased, chapter-based plan to extend Zendo Project's compassionate psychedelic peer support from festivals and events into year-round, neighborhood-level crisis response — beginning with a single pilot chapter in Brooklyn, New York.

Prepared by: [Your Name], Zendo Project volunteer
Prepared for: Zendo Project leadership, MAPS, and prospective partners
Version / date: Draft v0.1 · October 2026

Disclaimer. This document is an independent proposal written by a volunteer. It is **not affiliated with, approved by, or endorsed by Zendo Project or the Multidisciplinary Association for Psychedelic Studies (MAPS)** unless and until formally adopted by them. Zendo Project's name and principles are referenced for alignment only. Nothing here is legal, medical, or clinical advice; all legal, clinical, and insurance elements require review by qualified counsel and licensed professionals. Figures shown in yellow brackets are placeholders, not data.

1. Executive summary

For more than a decade, Zendo Project has shown that a calm space and a trained, compassionate peer can help people move through frightening psychedelic and emotional experiences — often without police, sedation, or a hospital visit. This proposal asks: what would it look like to offer that same care where people live, all year round?

The idea

Create a **Zendo Community Crisis Response program** organized as small, neighborhood **chapters**, starting on the East Coast with one pilot in Brooklyn, NY. Trained Zendo volunteers respond in person to people experiencing a mental-health crisis, a difficult psychedelic experience, or a distressing drug experience; every encounter has **remote licensed clinical oversight**; and each neighborhood has a quiet **Safe Zone** for de-escalation.

What makes it different

- Built on Zendo's Four Principles of Psychedelic Care and existing volunteer training.
- Peer-led, clinically supervised, medically backstopped — never a replacement for 911 or 988.
- A purpose-built responder app aligned with Zendo's existing **Serenity** documentation tool.
- Grows slowly, one chapter at a time, with go/no-go gates.

Each chapter includes

PAID / STIPEND

Chapter Coordinator

Runs scheduling, dispatch oversight, volunteer care, and partner relationships.

PAID

Remote Clinical Supervisor

LCSW (or LMSW under qualifying supervision) available live to every encounter.

PAID / ON-CALL

On-call Psychiatrist (MD/DO)

Consults on emergencies, medical/psychiatric red flags, and escalation.

STIPEND OR VOLUNTEER

Hospital & Clinic Liaison

Helps admitted guests and families navigate psychiatric EDs and clinics.

VOLUNTEER

Tier 2 Responders

Advanced-trained volunteers who lead field responses and Safe Zone shifts.

VOLUNTEER

Tier 1 Sitters

Foundation-trained volunteers who sit in the Safe Zone, at events, and as second responders.

Top-line asks of Zendo / MAPS leadership

1. **Permission to explore** — approval to develop this concept under Zendo's name with a named staff sponsor.
2. **Alignment on training** — confirm how Zendo's two training levels map to Tier 1 / Tier 2, and co-design a field-response module.
3. **Serenity access** — a conversation with Zendo's systems team about extending or integrating with Serenity.
4. **Legal & insurance review** — engage Zendo's counsel on liability, scope of practice, and privacy before any field activity.
5. **A 6-month discovery phase** — partner meetings in Brooklyn, a needs assessment, and a funded pilot budget.

FOUNDATION

2. Zendo Project today

Zendo Project began at Burning Man in 2012 as a harm-reduction initiative of MAPS. After ten years of incubation, it became its own 501(c)(3) nonprofit in 2023 while remaining "closely allied with MAPS."[1] Its current mission is "to expand compassionate crisis support — including care for non-ordinary psychological and emotional states — through training, peer-based services, and research across communities and systems of care."[2] The team includes mental-health professionals, doctors, nurses, social workers, and harm-reduction experts, with a Medical Director who is an emergency-medicine and EMS physician.[2]

2012
Founded at Burning Man as a MAPS program[1]

10,000+
trained peers and professionals (per Zendo)[3]

6,500+
people cared for across four continents in first 10 years[1]

416 / 566
volunteers trained / guests served, Burning Man 2022[1]

The Four Principles of Psychedelic Care[2]

Safe Space
Tending to safety is foundational to healing and transformation.

Sitting, Not Guiding
Cultivating presence while letting go of an agenda honors the individual's inner healing intelligence.

Through, Not Down
We accompany people through their experiences, without seeking to halt or bypass the process.

Difficult Is Not Necessarily Bad
Difficult and/or complex experiences can lead to wisdom, growth, and new understandings.

How Zendo works at events

Zendo provides on-site peer support and a "tranquil space" at events, working "collaboratively with production, medical, security, and law enforcement."[4] Volunteer roles include **Greeters**, **Sitters**, **Logkeepers** (who "keep track of lots of moving people and parts, using an iPad"), **Logistics**, **Medical Triage** (EMT or higher required), and **Pulse**, which supports volunteer well-being. All event volunteers receive pre-event and on-site training.[4] Zendo's early mission explicitly included reducing "the number of drug-related psychiatric hospitalizations" and demonstrating that safe experiences are possible "without the need for law enforcement-based policies."[5]

Training offerings (public)

- **Free Psychedelic Care Kit / mini-course** — a 30-minute training on the Four Principles plus a pocket card.[3]
- **Zendo SIT (Specialized Training in Psychedelic Care)** — 8 hours of live online training plus 1 hour self-paced; CE credit available for eligible licensed professionals.[6] Modules cover the Four Principles and "Navigating Critical Situations," including identifying medical and mental-health emergencies within the scope of peer support.[7]

The volunteer reports two Zendo certification levels; their exact names and requirements should be confirmed with Zendo: [Level 1 name] / [Level 2 name]. Important: Zendo states the SIT Course Completion Award "does not constitute … authorization to provide … crisis services."[6] This plan therefore adds a separate, supervised field-response credential (Section 10).

Serenity — Zendo's encounter documentation tool

A 2026 peer-reviewed article co-authored by Zendo-affiliated researchers describes **Serenity** as "Zendo Project's internal data collection tool," developed to standardize encounter documentation with time-stamped records of **intake, reassessment, intervention, and disposition**.[8]

- Evolved from paper; first software version in 2019 with one iPad per site run by a Logkeeper; later expanded to shift leads, medical triage, and coordinators.
- Validates required fields at guest departure, embedding data quality in the workflow.
- Designed so "sitters do not interact with devices while supporting guests."[8]

Why this matters: Serenity already encodes the encounter lifecycle this program needs. Building the community app *with* Serenity — rather than beside it — preserves Zendo's data model, quality standards, and its principle that technology should stay out of the moment of care.

CONTEXT

3. The need and the opportunity

Psychedelic and other substance use happens mostly outside clinics and festivals — at home, at parties, and in public space. When those experiences become frightening, people and their friends often have only two options: ride it out alone or call 911.

MAPS and Zendo have noted that over 5.5 million people in the U.S. used psychedelics in 2019 (Livne et al., 2022), and that "most psychedelic use occurs outside of therapeutic contexts."[1] Zendo's leadership has argued that its skills are "highly transferable" and could "fill a gap in care" by making peer support more available to everyone.[1] Local data for Brooklyn should be gathered during discovery: [# psychiatric ED visits related to hallucinogens/stimulants, Brooklyn, most recent year — source: NYC DOHMH / SPARCS], [# 911 mental-health (EDP) calls in pilot precincts], [nightlife venue count in pilot area].

What existing models teach us

Model	What it is	Lesson for this program
CAHOOTS Eugene/Springfield, OR	Launched 1989 by White Bird Clinic; two-person teams (a medic plus a crisis worker), unarmed, using trauma-informed de-escalation and harm reduction. White Bird reported roughly 24,000 calls in a year with police backup requested only 150 times, on a ~$2.1M budget.[9]	**Non-police response works — and funding is fragile.** In April 2025 White Bird and the City of Eugene ended CAHOOTS service in Eugene over contract and funding issues; city funding covered about 40% of its cost there. Service continued in Springfield.[10] Grow slowly and diversify funding.
B-HEARD New York City	Since 2021, teams of two FDNY EMTs/paramedics plus an NYC Health + Hospitals mental-health professional respond to eligible 911 mental-health calls, 16 hours/day in parts of four boroughs, including several Brooklyn neighborhoods. Teams are not dispatched where violence or imminent harm is identified.[11]	**A complement, not a competitor.** A 2025 Comptroller audit (as reported) found teams did not respond to over one-third of eligible calls; staffing and funding remain challenges.[12] Zendo chapters could fill the lower-acuity, substance-related, and event niche B-HEARD does not target.
988 Lifeline	National three-digit Suicide & Crisis Lifeline, launched July 2022, funded by SAMHSA and administered by Vibrant Emotional Health; 24/7 support for mental-health, suicide, and substance-use crises.[13,14] In NYC, 988 connects to counselors and the city's urgent mental-health services.[11]	**Built-in escalation path.** The app should offer one-tap 988 and 911, and the program should seek a referral relationship with NYC 988.
Fireside Project	Nonprofit Psychedelic Support Line (since 2021): free, confidential peer support by phone, text, and app, 11 a.m.–11 p.m. Pacific, at 62-FIRESIDE; ~40,000 conversations, 95% of callers felt heard and understood (self-reported).[15,16]	**Remote + in-person = continuum.** Fireside offers remote support; Zendo chapters could offer the in-person layer. Warm-handoff and integration-support partnership is a natural fit.
Peer crisis response	NYC Mobile Crisis Teams pair master's-level clinicians with peer staff for urgent (non-911) referrals.[11]	Peer + clinician pairing is an established practice — our model applies it with clinicians supervising remotely.

The gap this program fills

A person having a terrifying trip in a Brooklyn apartment at 2 a.m., or a friend sitting with someone at a warehouse party, needs someone calm, trained, and non-judgmental *now* — but often does not need police, an ambulance, or an inpatient admission. Zendo's model is purpose-built for exactly that moment. The opportunity is to offer it locally, year-round, with professional oversight and clear escalation paths.

DESIGN

4. Program model: chapters & roles

The program is organized as **neighborhood chapters** under an East Coast program umbrella, which itself sits under Zendo Project's governance, training standards, and medical direction. Chapters share one app, one training pathway, and one set of protocols; each chapter is small enough that volunteers can reach a person on foot or by short transit ride.

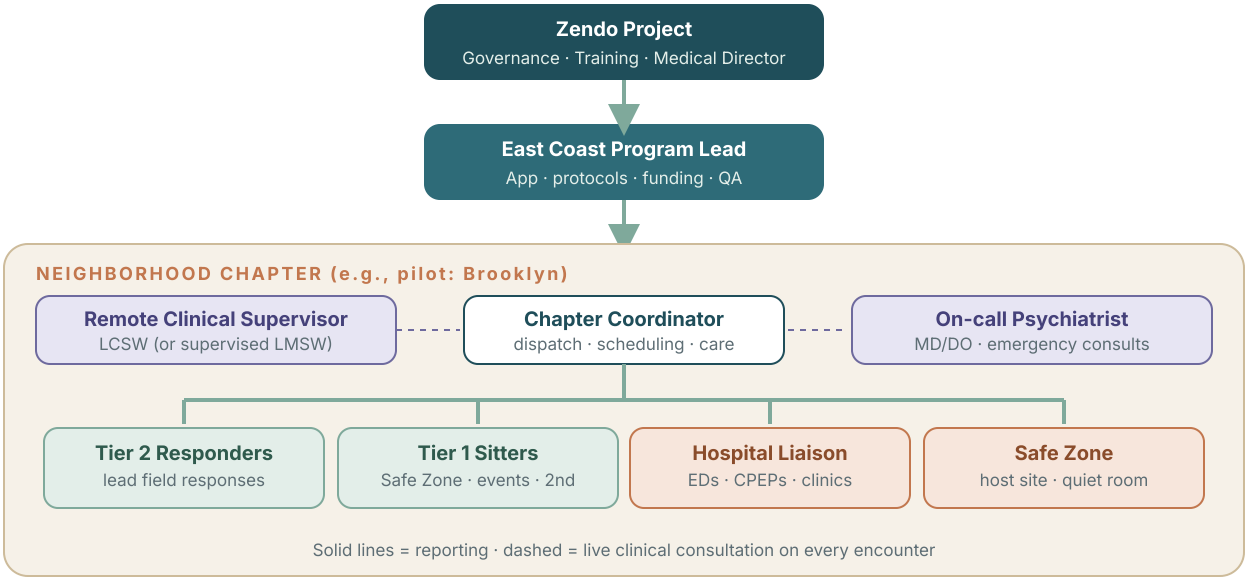

Figure 1. Proposed chapter structure.

Role	Core responsibilities	Qualifications	Status
Chapter Coordinator	Owns the on-call roster and event coverage; monitors live encounters in the app; recruits and supports volunteers; runs debriefs; maintains partner and Safe Zone relationships.	Zendo Tier 2; leadership experience; ideally harm-reduction background.	Paid part-time
Remote Clinical Supervisor	Joins every encounter by in-app chat/voice; supports risk assessment; decides with responder on escalation; signs off on encounter close; provides group supervision.	Licensed in the state where the guest is located — see scope note below.	Paid (hourly on-call + supervision)
On-call Psychiatrist	Second-line consult for medical/psychiatric red flags (e.g., suspected serotonin syndrome, psychosis with risk, interactions); advises when to call 911; reviews protocols with Zendo's Medical Director.	MD/DO, state-licensed; psychiatry or emergency medicine.	Paid retainer / per-consult
Hospital & Clinic Liaison	Maintains relationships with local EDs, psychiatric emergency programs, and clinics; supports guests/families (with consent) after admission; helps route to the right level of care.	Social-work, peer-specialist, or patient-navigator background.	Stipend or volunteer [decide]
Tier 2 Responder	Primary in-person responder; leads Safe Zone shifts; mentors Tier 1.	Zendo Level 2 [confirm] + field credential.	Volunteer
Tier 1 Sitter	Sits with guests in Safe Zones and at events; second responder alongside Tier 2.	Zendo Level 1 [confirm] + orientation.	Volunteer

Clinical oversight: LMSW vs. LCSW scope (verify with counsel)

- **New York:** an LMSW may provide clinical social work services only under supervision by a qualified LCSW, psychologist, or psychiatrist; an LCSW may practice clinical social work independently.[17,18]
- **New Jersey:** an LSW may provide clinical services only under supervision of an eligible LCSW (including at least one hour weekly of face-to-face or qualifying HIPAA-compliant video supervision).[19]
- **Massachusetts:** the independent clinical license is the **LICSW**; an LCSW may do clinical work only when employed under LICSW supervision.[20]

Recommendation: make the chapter's lead clinical supervisor an independently licensed clinician (NY/NJ LCSW, MA LICSW). LMSWs can staff on-call shifts under that person's documented supervision. Counsel should advise whether real-time oversight of peer volunteers creates a clinical relationship with the guest, and how licensure applies when supervising remotely across state lines.

OPERATIONS

5. Encounter workflow

Every encounter follows the same lifecycle Zendo already documents in Serenity — **intake → reassessment → intervention → disposition**[8] — with a safety screen at the front and a clinician present (remotely) throughout.

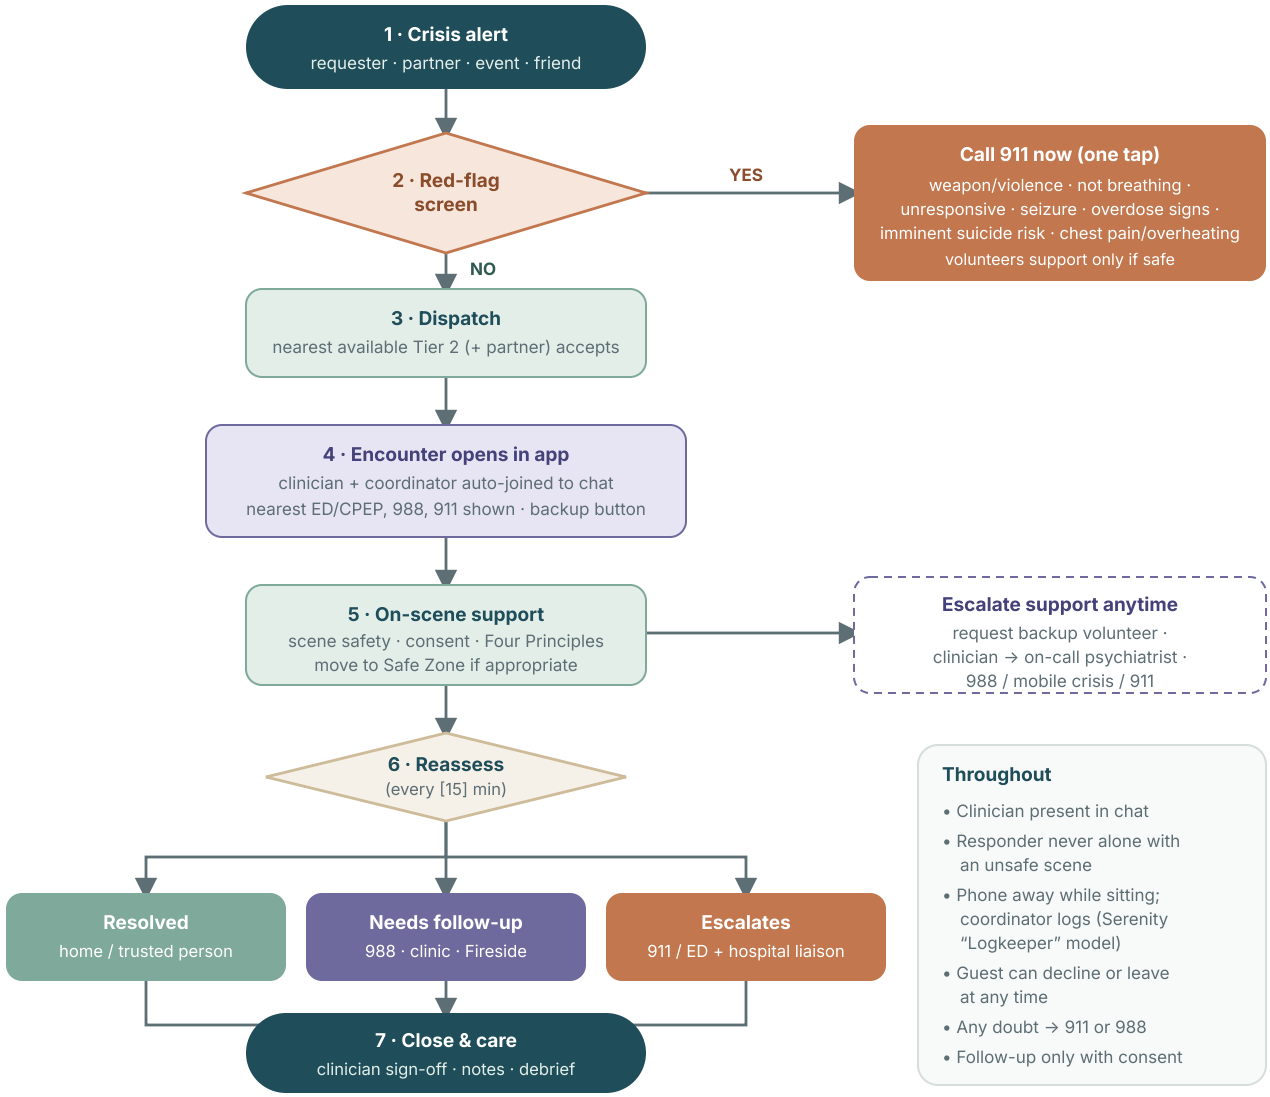

Figure 2. Proposed encounter workflow. Reassessment interval is a placeholder to be set by the clinical lead.

Step	What happens	Who
1 · Alert	A request arrives via the app (self, friend, venue, event staff, or partner referral). Requester sees: *"If anyone is in danger, call 911 now."*	Requester; app
2 · Red-flag screen	3–5 plain-language questions. Any "yes" → app prompts 911 and alerts coordinator; volunteers may support from a safe distance until EMS arrives.	Requester / coordinator
3 · Dispatch	Nearest on-call Tier 2 (with a Tier 1 or second Tier 2 partner — see Section 11) accepts; ETA shared with requester.	Coordinator; responders

Step	What happens	Who
4 · Encounter opens	Secure encounter room auto-adds the on-shift clinician and coordinator; shows nearest ED/psychiatric emergency program, 988, 911, Safe Zone, and a “request backup” button.	App
5 · On-scene	Scene safety check, consent, basic needs (water, warmth, quiet), Zendo-style sitting. Move to Safe Zone if guest agrees and is safe to walk/travel.	Responders; clinician by chat/voice
6 · Reassess	Structured check-ins at set intervals; clinician confirms whether to continue, refer, or escalate.	Responders + clinician
7 · Disposition & close	Home/trusted person, referral, or ED with liaison notified. Clinician sign-off; brief notes; responder debrief and Pulse-style check-in.	All

PLACE

6. Neighborhood Safe Zones

A Safe Zone is the year-round equivalent of the Zendo space at an event: a quiet, warm, low-stimulation room where a guest and volunteer can sit, rest, and let the experience settle. The aim is the first principle — *Safe Space* — made permanent in a neighborhood.

Proposed space requirements

- Private, quiet room(s) with dimmable light; space for 2–4 guests plus sitters [target sq ft]
- Comfortable seating, mats/beds, blankets, water, light snacks, art supplies (used since MAPS’ early event safe spaces[21])
- Accessible entrance, restroom, climate control, Wi-Fi/cell signal
- First-aid kit, AED [confirm], naloxone, posted emergency plan
- Separate staff area for debriefing; secure storage; no surveillance cameras in care areas
- Clear address for EMS access

Hosting options (lowest cost first)

1. **Partner-hosted room** in an existing harm-reduction, community, or faith space, after hours [in-kind]
2. **Pop-up Safe Zone** at events and parties (Zendo’s existing model)
3. **Shared lease** with an allied nonprofit
4. **Dedicated storefront** (later phases only)

> **Staffing during open hours:** at least one Tier 2 + one Tier 1 on site, coordinator on call, clinician reachable in-app. Open hours start limited (e.g., weekend nights) and expand with demand data.

Safe Zone costs (placeholders — obtain quotes)

Item	Basis	One-time	Annual
Space (partner-hosted or lease)	Hours/week × rate, or in-kind MOU	—	[$ — / in-kind]
Build-out & furnishing	Soft furnishings, lighting, soundproofing, signage	[$ —]	—
Safety equipment	First-aid, naloxone, AED, radios/phones	[$ —]	[$ — restock]
Supplies & hospitality	Water, snacks, blankets, laundry, cleaning	—	[$ —]
Insurance rider for premises	Broker quote	—	[$ —]

Outcomes from a Safe Zone

Resolved → guest leaves with a friend/family member or is accompanied home (transport policy TBD). **Needs ongoing support →** warm referral (988, clinic, integration support such as Fireside). **Escalates →** 911/ED, with the hospital liaison notified so the guest and family are not left to navigate the system alone.

TECHNOLOGY

7. The responder app

The app is the program's nervous system: it routes alerts, opens a supervised encounter, keeps escalation one tap away, and lets volunteers sign up for events. It should feel calm, minimal, and usable by someone who is nervous and in the dark.

Responder

- On-call toggle & availability
- Nearby alert → accept/decline
- Encounter room: chat/voice with clinician & coordinator
- "Request backup" button
- One-tap 911 / 988; nearest ED, psychiatric ER, Safe Zone
- Post-encounter notes & debrief prompt
- Event & party shift sign-ups

Coordinator / Clinician

- Live map of on-call responders (on shift only)
- Encounter dashboard & timers for reassessment
- Escalate to on-call psychiatrist
- Clinician sign-off to close encounter
- Roster, events, coverage gaps
- De-identified reports

Requester (later phase)

- "I need support" / "My friend needs support"
- Red-flag screen → 911 prompt
- Location share (session only)
- ETA & responder first name
- Grounding content while waiting
- Optional anonymous feedback

MVP scope (pilot) — build the smallest thing that is safe

Feature	MVP?	Notes
Volunteer onboarding, roles, credential status	Yes	Only credentialed Tier 2 can accept field alerts.
Alert intake by coordinator	Yes	Pilot alerts arrive via partners/hotline and are entered by the coordinator — no public-facing request button yet.
Nearest-responder dispatch	Yes	Location used only while on call; coarse location stored.
Encounter room (secure chat + voice)	Yes	Clinician + coordinator auto-added; end-to-end encrypted.
Backup / 911 / 988 / nearest facilities	Yes	Static, verified facility list per chapter.
Serenity-aligned encounter record	Yes	Intake → reassessment → intervention → disposition; required fields at close.
Event / party shift sign-ups	Yes	Could reuse an existing volunteer-scheduling tool initially.
Resource Board	Phase 2	See Section 8.
Public requester app	Phase 3+	Only after protocols, insurance, and capacity are proven.

Integration with Serenity

- **Option A — extend Serenity** with a "community encounter" mode (preferred if Zendo's systems team agrees).
- **Option B — separate dispatch app** that writes encounter records into Serenity's schema.
- Keep Serenity's design rule: sitters don't use devices while supporting guests; the **remote coordinator acts as Logkeeper**, and responders complete notes afterward.[8]
- Reuse Serenity's required-field validation at disposition.

Privacy & HIPAA posture

- **HIPAA** applies to "covered entities" (health plans, clearinghouses, and providers that conduct certain electronic transactions such as billing) and their business associates.[22] Whether this program is covered depends on its structure — counsel to decide. Recommendation: **design to HIPAA-grade standards regardless** and sign BAAs with vendors.
- **42 CFR Part 2** may apply to federally assisted substance-use-disorder programs.[23] NY's **SHIELD Act** sets data-security and breach-notice duties.[24]
- Data minimization: no names required; no substance info tied to identity; location purged after close; retention schedule [e.g., X days].
- Written policy for law-enforcement data requests; informed consent language reviewed by counsel.

COMMUNITY

8. Volunteer Resource Board

Every volunteer carries knowledge: a clinic that sees uninsured patients, a Spanish-speaking integration circle, a shelter with open beds tonight, a lawyer who helps with ACS cases. The Resource Board turns that scattered knowledge into a shared, living network.

How it works

1. A volunteer posts a need ("Need: Haitian Creole-speaking peer support near Flatbush").
2. Any volunteer can reply, upvote, or tag someone who knows.
3. Helpful answers are saved to a **verified chapter directory** after coordinator review.
4. Directory entries carry "last verified" dates and are re-checked quarterly.

Guardrails

- **No guest-identifying information** in posts — needs are described generically.
- Not for emergencies (auto-reminder: use the encounter room / 911 / 988).
- Moderated by coordinators; code of conduct.
- Pilot can start in a moderated group channel or form before building it into the app.

9. Hospital & clinic liaison program

When an encounter ends in the emergency department, the person often enters a confusing system at their most vulnerable. Each chapter's liaison helps make that transition humane and helps guests reach the right level of care.

Liaison responsibilities

- Know local options: hospital EDs, Comprehensive Psychiatric Emergency Programs (CPEPs), crisis stabilization/support-and-connection centers, outpatient clinics, detox and integration resources
- Build relationships with ED social work and psychiatric intake teams; pursue MOUs
- With the guest's consent, follow up after admission: help family understand the process, pass on (with consent) the de-identified encounter summary, connect to discharge resources
- Feed learnings back to the resource directory

Boundaries

- Liaisons are navigators and advocates, not treating providers
- All contact with hospitals about a guest requires the guest's written or recorded consent (or a lawful basis advised by counsel)
- Hospital access rules govern any on-site presence
- Pilot targets: [NYC Health + Hospitals/Kings County — verify CPEP], [other Brooklyn ED], [community clinic]

Context: NYC B-HEARD teams offer everyone served follow-up care, including mobile crisis, outreach, or hospital-based programs;[11] NYC has one Support and Connection Center in East Harlem offering short stays as a hospital alternative (as reported in 2026).[12] The liaison should map which of these a peer program can refer to.

PEOPLE

10. Training & certification pathway

The pathway builds on Zendo's existing training and adds field-specific skills that event work doesn't require (responding in homes and streets, working remotely with a clinician, urban safety). Final content should be co-designed with Zendo's training team and Medical Director.

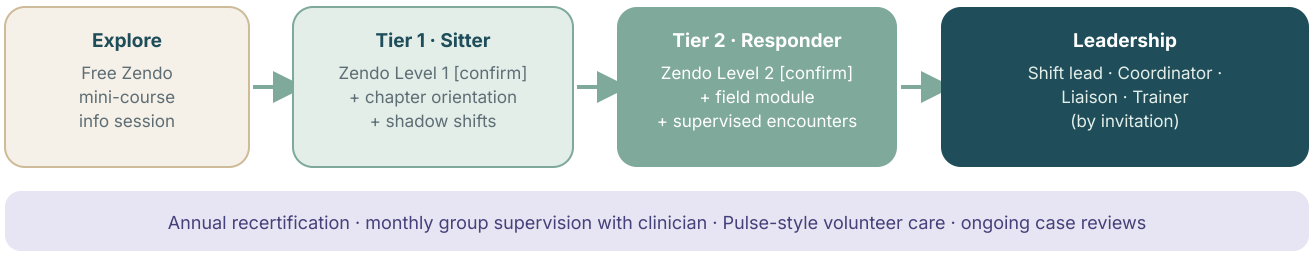

Figure 3. Proposed volunteer pathway.

Component	Tier 1 — Sitter	Tier 2 — Responder
Zendo foundation	Zendo Level 1 [confirm name/hours]	Zendo Level 2 [confirm]; Zendo SIT recommended[6]
Safety skills	CPR/First Aid; naloxone (opioid overdose) training; basic de-escalation	All Tier 1 + situational/urban safety; recognizing medical red flags (with Medical Director); suicide-risk screening under clinician direction [tool TBD by clinical lead]

Component	Tier 1 — Sitter	Tier 2 — Responder
Program protocols	Safe Zone procedures; consent; confidentiality; mandated-reporting awareness [counsel]	Field response; working with remote clinician; escalation & 911 handoff; documentation
Practicum	[#] shadow shifts in Safe Zone or at events	[#] encounters as second responder + sign-off by clinical lead
Screening	Application, interview, references, background check [scope per counsel]	Same + demonstrated reliability at Tier 1 for [# months]
May do	Sit in Safe Zone/events; accompany a Tier 2	Accept field alerts; lead Safe Zone shift; mentor Tier 1

Note: this program credential would be issued by the program (and ideally co-branded by Zendo once approved). It is distinct from the Zendo SIT Course Completion Award, which Zendo states is not a credential or authorization to provide crisis services.[6]

SAFETY

11. Safety, escalation & risk protocols

This program is designed for **non-violent, non-life-threatening** situations. It does not replace 911, EMS, or 988, and responders never trade safety for presence. Final protocols must be written and signed off by the clinical lead and Zendo's Medical Director.

Call 911 immediately when…

- Anyone is unresponsive, not breathing normally, or has blue/grey lips (give naloxone if opioids possible)
- Seizure, chest pain, very high body temperature, severe confusion with fever/rigidity
- Serious injury, head injury, or uncontrolled bleeding
- Weapon present, violence, or threat of violence
- Imminent risk of suicide or harm to others
- The responder feels unsafe for any reason

New York's 911 Good Samaritan law (Penal Law §220.78) protects people who seek emergency help for an overdose from certain possession charges; it has limits (e.g., sale offenses, warrants, parole/probation).[25] Volunteers should know and share this to reduce fear of calling.

Call the clinician / on-call psychiatrist when…

- Any mention of suicidal thoughts or self-harm (clinician leads risk assessment)
- Psychotic symptoms that persist or include risk
- Possible dangerous combinations (e.g., stimulants, MAOIs/SSRIs with MDMA, alcohol + sedatives)
- The person is a minor [minors policy — counsel]
- Guest wants to leave but may be unsafe
- No improvement after [X] reassessments

Volunteer safety standards (proposed)

Never alone

Field responses in pairs (Tier 2 + partner). Solo response only for public, low-risk settings if the clinical lead approves — [decision].

Scene check

Pause before entering; coordinator knows exact location; check-in timer; code word for "I need help." Leave and call 911 if unsafe.

No transport

Volunteers don't drive guests in personal vehicles in the pilot; walk, rideshare with a partner, or EMS [policy].

Boundaries

No restraint, no medication, no substances, no "guiding" the trip. Zendo's non-directive approach applies.

Care for carers

Mandatory debrief after each encounter; Pulse-style peer support; access to counseling; shift limits.

Incident review

Every escalation and safety incident gets a blameless review with the clinical lead within [7] days.

12. Legal, liability & insurance

The points below are issues to raise with counsel, not legal conclusions.

Issue	What we know	Action
Good Samaritan (civil)	NY Public Health Law §3000-a shields people who voluntarily and without expectation of payment give first aid or emergency treatment outside a medical facility, except for gross negligence; it excludes licensed health professionals acting in their professional capacity.[26]	Ask counsel whether it applies to an organized, pre-arranged program (likely limited) and to paid staff.
Volunteer Protection Act	Federal law (42 U.S.C. §14501 et seq.) limits some liability for nonprofit volunteers acting within scope; it does not protect the organization itself.[27]	Clarify scope, training, and documentation needed; state variations (NY/NJ/MA).
Scope of practice	Peer support is not therapy or medical care. LMSW/LCSW and MD roles are governed by state licensure rules (Section 4).[17–20]	Written scope statements per role; clinician contracts; cross-state licensure plan.
Drug-related exposure	Volunteers encounter people who have used controlled substances; harm-reduction programs must avoid any appearance of facilitating use.	Clear no-possession/no-distribution policy; counsel review of Safe Zone operations.
Privacy & records	HIPAA, 42 CFR Part 2, SHIELD Act may apply (Section 7).[22–24]	Privacy impact assessment before app build.
Mandated reporting / minors	Obligations vary by role and state.	Policy for minors and child/elder-abuse disclosures.

Insurance to quote (via a nonprofit broker)

General liability · professional liability / errors & omissions (covering peer services and clinical consultants) · abuse & molestation · directors & officers · cyber liability (app data) · volunteer accident · hired/non-owned auto · premises coverage for Safe Zones. Confirm whether Zendo's existing event coverage can be extended or whether a separate policy is needed: [annual premium estimate].

RESOURCES

13. Staffing & budget (pilot chapter, year 1)

All dollar figures below are **placeholders**. Hours are proposed planning assumptions for a pilot with limited operating hours; they should be replaced with local salary benchmarks (e.g., BLS wage data, partner pay scales) and vendor quotes during discovery.

Line item	Paid / volunteer	Basis (proposed)	Low	High
Personnel				
Chapter Coordinator	Paid (PT)	~20 hrs/wk × hourly rate	[$]	[$]
Remote Clinical Supervisor(s)	Paid	On-call hours during operating window + 2 hrs/mo group supervision	[$]	[$]
On-call Psychiatrist	Paid	Monthly retainer + per-consult fee	[$]	[$]
Hospital & Clinic Liaison	Stipend / vol.	~5–10 hrs/wk	[$0]	[$]
Tier 1 & Tier 2 volunteers	Volunteer	Target [#] Tier 2 + [#] Tier 1	$0	$0
East Coast Program Lead (shared)	Paid / vol.	Share of time allocated to pilot	[$]	[$]
Training				
Zendo training seats, CPR, naloxone, field module	—	Per-volunteer cost × cohort; scholarships	[$]	[$]
Background checks	—	Per volunteer	[$]	[$]
Technology				
App MVP build (or Serenity extension)	—	Vendor quote or pro-bono partner	[$]	[$]
Hosting, secure messaging, licenses	—	HIPAA-eligible vendors with BAAs	[$]	[$]
Safe Zone		See Section 6	[$]	[$]
Insurance		Broker quote (Section 12)	[$]	[$]
Supplies & equipment		Kits, naloxone, phones/radios, IDs	[$]	[$]
Evaluation		Data analysis; optional academic partner	[$]	[$]
Admin / fiscal overhead		[%] of direct costs	[$]	[$]
Total pilot year			**[$ total]**	**[$ total]**

Why pay the clinicians?

Real-time clinical oversight of every encounter is the program's core safety promise, and it must be reliable at 2 a.m. Volunteer clinicians are hard to schedule consistently, so this plan assumes paid on-call clinical coverage from day one, with volunteer clinicians as a supplement. Many clinicians may also value supervision hours and CE-relevant experience.

14. Funding strategy

CAHOOTS' 2025 contraction in Eugene, where city funding covered ~40% of costs and federal grants became uncertain,[10] is a reminder to avoid single-source dependence.

Philanthropy

Psychedelic-aligned foundations and donors (including those who already support Zendo and MAPS); community foundations in Brooklyn/NYC; individual giving and a "sponsor a Safe Zone" campaign.

Public funds

NYC DOHMH and NYC Council discretionary funding; New York State OMH / OASAS grants; opioid settlement funds (harm-reduction eligible uses — verify); SAMHSA crisis-continuum grants.

Earned & in-kind

Event service contracts (festivals, nightlife venues); trainings for venues and staff; pro-bono app development; donated space; university partnerships for evaluation.

ECOSYSTEM

15. Partnerships

Partner	Why	Proposed ask
Zendo Project / MAPS	Brand, principles, training, Serenity, Medical Director, event network	Sponsorship of pilot; training co-design; data & tech alignment
Fireside Project	National psychedelic peer support line (phone, text, app), 11 a.m.–11 p.m. PT[15]	Two-way warm handoff protocol; integration follow-up; shared learning; possible cross-training
NYC 988 / 988 Lifeline	24/7 crisis counseling and access to NYC's urgent mental-health services[11,14]	Referral pathway for after-hours or remote support; awareness of chapter coverage
NYC DOHMH & Mayor's Office of Community Mental Health	Oversee crisis programs including B-HEARD and mobile crisis[11]	Briefing; data sharing on needs; potential funding; avoid duplication
Hospitals & CPEPs (e.g., NYC Health + Hospitals)	Escalation destination; liaison program	MOU for liaison contact, handoff format, and referral back to community
OnPoint NYC and other harm-reduction orgs	OnPoint operates two overdose prevention centers (East Harlem, Washington Heights) and reports 2,000+ overdose interventions[28]	Cross-training (naloxone, overdose response); referrals; possible Safe Zone hosting by local harm-reduction partners
Nightlife & event producers	Where many difficult experiences start	Event coverage contracts; venue staff training; referral line
Universities	Evaluation, volunteers (social work, nursing, medicine)	Field placements; IRB-approved evaluation (as in Zendo's 2026 study)[8]

16. Pilot plan & phased rollout

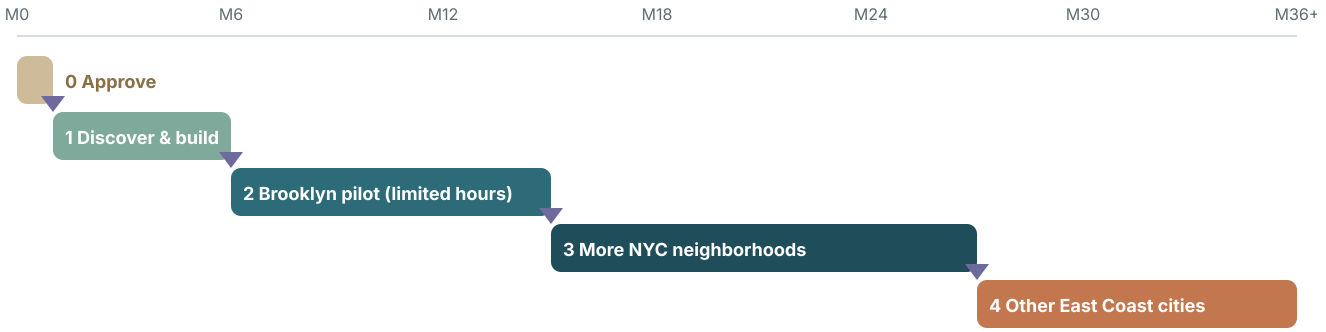

Figure 4. Indicative timeline; each ▼ marks a go/no-go gate reviewed by Zendo leadership. Months are planning assumptions.

Phase	Key activities	Gate to move on
0 · Approval ~Month 0–1	Present plan; name Zendo sponsor; agree scope, branding, and decision rights	Written go-ahead for discovery
1 · Discover & build ~Months 1–6	Brooklyn needs assessment & partner meetings; counsel and insurance review; hire clinical lead; draft protocols; recruit first cohort; app MVP or Serenity extension; secure Safe Zone host; pilot funding	Insurance bound; protocols signed by clinical lead & Medical Director; ≥ [#] credentialed Tier 2; funding for 12 months
2 · Brooklyn pilot ~Months 6–15	Start with event coverage and Safe Zone on [e.g., Fri–Sat nights]; then partner-referred field responses; monthly review of every escalation	Safety record meets thresholds; volunteer retention; partner satisfaction; sustainable funding path
3 · More NYC chapters ~Months 15–27	Add 1–2 neighborhoods [candidates]; regional clinical pool; Resource Board; consider public requester feature	Chapter playbook validated; multi-year funding
4 · East Coast ~Month 27+	Replicate in cities with strong volunteer bases [e.g., Philadelphia, Boston, New Jersey, DC — to be assessed]; state-specific licensure and legal review	Local anchor partner + licensed clinical lead in that state

17. Success metrics

Reach & responsiveness

- Encounters per month (field, Safe Zone, events)
- Median time from alert to arrival — target [X min]
- % of operating hours with full coverage (responders + clinician)
- Events covered

Outcomes

- % resolved without ED transport; % appropriately escalated (clinician-reviewed)
- Police involvement rate
- Guest-reported experience ("felt safe/heard") — a measure Fireside also uses[15]

Safety & quality

- Adverse events and safety incidents (target: zero serious harm to guests or volunteers)
- % encounters with clinician present and signed off (target: 100%)
- Record completeness at close (Serenity-style validation)

Volunteers & sustainability

- Volunteers trained, credentialed, retained at 6/12 months
- Volunteer well-being check-ins
- Funding diversity (no source > [40]% of budget)
- Partner MOUs signed

- % of consenting guests connected to follow-up

Baselines for comparison (e.g., local ED visits or 911 mental-health calls) should come from public data or partners: [baseline sources]. Evaluation should follow the documentation and ethics approach Zendo used in its 2026 study.[8]

DECISIONS

18. Open decisions, next steps & asks

Key decisions for leadership

#	Decision	Options / recommendation
1	Program home & brand	Zendo-run program · Zendo-licensed affiliate · independent partner trained by Zendo. *Rec: Zendo-sponsored pilot with a clear brand-use agreement.*
2	Tier mapping	Confirm Zendo's two levels and what extra field training Tier 2 needs. *Rec: co-design with Zendo training team.*
3	Paired vs. solo response	*Rec: pairs for all field responses during pilot.*
4	Who can raise an alert	Partners/events only · hotline referrals · public app. *Rec: partners + events first; public later.*
5	Clinical coverage model	One LCSW lead + LMSW on-call pool; shared across chapters; hourly vs retainer. Psychiatrist retainer; Medical Director role.
6	Safe Zone model & hours	Partner-hosted vs. leased; which nights/hours first.
7	App approach	Extend Serenity · new app writing to Serenity · off-the-shelf dispatch tool for pilot.
8	Liaison compensation	Volunteer vs. stipend vs. part-time staff.
9	Policies needing counsel	Transport, minors, mandated reporting, data retention, law-enforcement requests.
10	Pilot neighborhood	Which Brooklyn area? Weigh nightlife density, volunteer base, partners, and overlap with B-HEARD coverage areas.[11]
11	Fiscal home	Zendo budget line · fiscal sponsor · separate entity later.

Next 30 days

- Share this draft with Zendo leadership
- Confirm training levels and Serenity contacts
- List Brooklyn volunteers interested
- Informal calls: Fireside, a harm-reduction partner

Next 60 days

- Counsel & broker conversations
- Identify clinical lead candidates
- Shortlist Safe Zone hosts
- Gather local baseline data

Next 90 days

- Finalize pilot budget (replace placeholders)
- Submit first grant / donor asks
- Draft protocols v1
- App approach decision & prototype

What I'm asking for today

(1) A green light to run Phase 1 discovery under Zendo's guidance; (2) a named Zendo staff sponsor; (3) introductions to Zendo's training lead, Medical Director, systems/Serenity team, and counsel; and (4) permission to begin partner conversations in Brooklyn describing this as a *proposal under consideration*.

Disclaimer: volunteer-authored proposal; not affiliated with or endorsed by Zendo Project or MAPS until formally approved; not legal, medical, or clinical advice; highlighted placeholders must be replaced with verified data.
